

Discussed.

• To Do's for 06.11.24

→ Block Diagram

→ Understand step-by-step what is going on with all of the connections of controller

→ I/O voltage & Current levels

→ Select I/O of controller → go see where it is connected

↳ determine what this signal is doing

↳ determine what form this signal is in (I/O voltage & current)

→ Afterwards to double check → can look at TI schematics (data sheet)

→ Start with Gate Signals/Drivers

• For Diagrams in thesis → Vector based

Tikz pictures

Incscope

• Confirm BA application process / come up with tentative title

• Git → Make & share with Eike.

Vector based diagrams. → Also for block diagrams.

TikZ pictures
Incroape

→ Midterm presentation;

Gate Signals & Analog sensig

Our board to invertor

Determining what signal has to be

Get part name → Artikel number

Data sheet

Microcontroller voltage are going lower & lower

⇒ Understanding step-by-step what is going on
in the connections.

Start with Gate Signals & Drivers.

→ we need interface information → Voltage levels for I/O
→ Current I/O
information

⇒ To double check → TI schematics

⇒ Ask Studienberatung about how long it takes for BA

↳ ~~AA~~

LRZ → Git → have all files saved on the

↳ Create a project.

↳ Make a clone of the Git project Abschlussarbeiten

↳ Invite Eyke

↳ folder for meeting notes. So everything is there.
